

8x8 Cutover Checklist (Mode A First)

#Objective

Deploy a dedicated 8x8 number for agent operations with compliance-first controls, inbound summarization, and escalation routing.

#Pre-Cutover (Planning)

- ☐ Confirm dedicated 8x8 DID to use for agent ops
- ☐ Confirm voice + SMS capability on the DID
- ☐ Confirm business hours and quiet hours
- ☐ Define escalation recipients (primary + backup)
- ☐ Define severity levels (urgent, normal, low)
- ☐ Confirm compliance policy (DNC/TCPA/quiet-hours)

#Ownership

- ☐ Business owner: Todd
- ☐ Technical owner: Henry agent workflow
- ☐ Compliance reviewer assigned

#8x8 Admin Configuration

#Number + Routing

- ☐ Assign DID to automation endpoint/workflow target
- ☐ Enable inbound voice handling
- ☐ Enable inbound SMS handling (if licensed)
- ☐ Set fallback destination if workflow unavailable

#Call Handling

- ☐ Create call flow: inbound -> capture -> summarize -> notify
- ☐ Configure voicemail fallback
- ☐ Add caller ID preservation in event payloads
- ☐ Set ring/timeout thresholds for fallback transfer

#Messaging Handling

- ☐ Route inbound SMS to same summarization pipeline
- ☐ Enforce opt-out detection (STOP, UNSUBSCRIBE)
- ☐ Suppress outbound replies during quiet hours unless urgent

#OpenClaw / Workflow Configuration

#Inbound Processing

- ☐ Normalize payload fields (caller, time, transcript/body)

- [] Classify intent (service, sales, billing, urgent)
- [] Generate concise summary + next action recommendation

#Escalation Rules

- [] Urgent -> immediate Telegram alert to Todd
- [] Normal -> queue in digest + task list
- [] Low -> daily summary only

#Logging/Audit

- [] Store event ID, source number, timestamp, classification
- [] Store action taken and destination recipient
- [] Keep audit history for compliance review

#Compliance Guardrails (Must Pass)

- [] Quiet hours enforced (e.g., 9PMâ 8AM local)
- [] DNC/TCPA suppression checked before any outbound follow-up
- [] Opt-out immediately suppresses future outbound automation
- [] No autodial/outbound campaign in Mode A
- [] Manual approval required for first outbound workflows

#Testing (Go/No-Go)

#Test Set A: Inbound Voice

- [] Place test call from known number
- [] Verify event capture + transcript/summary
- [] Verify urgent/non-urgent classification logic
- [] Verify escalation routing and message formatting

#Test Set B: Inbound SMS

- [] Send test SMS with normal request
- [] Send test SMS with STOP keyword
- [] Verify suppression behavior and logging

#Test Set C: Failure/Fallback

- [] Simulate workflow failure
- [] Verify fallback route triggers correctly
- [] Verify no message loss in failure mode

#Cutover Execution

- [] Freeze config changes 15 min before cutover
- [] Enable production routing on DID
- [] Confirm first live event processed end-to-end

- [] Monitor first hour with live checks every 10 minutes
- [] Record issues + hotfix actions

#Post-Cutover (First 7 Days)

- [] Daily review of alerts, misroutes, false urgents
- [] Tune classification prompts and escalation thresholds
- [] Validate compliance suppressions daily
- [] Weekly summary report: volume, routing accuracy, response times

#Mode B Readiness (Outbound Later)

Only proceed after Mode A is stable for 7+ days:

- [] Outbound consent model verified
- [] Approved templates loaded
- [] Quiet-hours and opt-out tested in production
- [] Manual approval gate removed only after compliance sign-off

#Final Sign-Off

- [] Technical sign-off
- [] Compliance sign-off
- [] Business sign-off
- [] Cutover complete date recorded
