

PRD â Insurance Quote Marketplace MVP (Insurify-Style)

#1) Product Summary

Build a fast, conversion-focused insurance quote marketplace MVP that captures inbound consumer quote requests, routes leads to internal agents based on rules, and tracks funnel + SLA performance.

#2) Goals

- Launch in 30 days with FL-first scope.
- Minimize quote-request friction.
- Route leads automatically with clear ownership.
- Measure speed-to-contact and conversion performance.

#3) Non-Goals (MVP)

- Full national rollout.
- Deep carrier API quoting integrations.
- Advanced pricing engine.
- Complex call-center tooling.

#4) MVP Scope

- Product lines: Auto + Home (initial)
- Geography: FL (expandable)
- Public pages:
 - Homepage
 - Auto page
 - Home page
 - Multi-step quote form
 - Thank-you page
- Internal pages:
 - Login
 - Lead dashboard
 - Routing rules manager
 - SLA alerts view

#5) Users & Roles

- Consumer: submits quote request.
- Producer: receives/works assigned leads.
- CSR: supports service/follow-up.
- Admin/Ops: manages rules, users, monitoring.

#6) User Stories

1. As a consumer, I can submit quote details in under 3 minutes.
2. As Ops, I can auto-route leads by state/product.
3. As a producer, I can see new leads and contact status.
4. As admin, I can detect untouched leads beyond SLA.

5. As leadership, I can see funnel metrics by source.

#7) Functional Requirements

##7.1 Public Funnel

- Multi-step form with validation
- Required fields:
 - name, phone, email, zip/state, product type
- Optional fields based on product path
- Progress indicator + save partial (optional if fast)

##7.2 Lead Intake API

- POST /api/leads
- Validate + normalize phone/email
- Store UTM/source fields
- De-dupe window (configurable)

##7.3 Routing Engine

- Rule dimensions:
 - state
 - product type
 - priority/order
- Assign lead to owner and record assignment reason

##7.4 Notifications

- On assignment:
 - email to assignee
 - optional SMS alert
- On SLA breach:
 - escalate to ops/admin

##7.5 Admin Dashboard

- Lead list + filters (new/assigned/contacted/closed)
- Detail pane with timeline/events
- Routing rules CRUD
- Users/roles management
- Export CSV

##7.6 Metrics

- Lead response time
- Quote-start to completion rate
- Conversion by source
- Volume by state/product

#8) Data Model (Core)

##leads

- id (uuid)
- created_at, updated_at
- full_name, email, phone

- state, zip
- product_type
- status (new/assigned/contacted/qualified/closed/lost)
- assigned_user_id
- source, utm_source, utm_medium, utm_campaign, utm_content, utm_term
- payload_json

##lead_events

- id, lead_id
- event_type
- actor_type (system/user)
- actor_id
- metadata_json
- created_at

##routing_rules

- id
- active
- state
- product_type
- assignee_user_id
- priority
- notes

##users

- id
- role (admin/producer/csr/ops)
- name
- email
- phone
- active

#9) Tech Stack

- Frontend: Next.js + Tailwind
- Backend: Next API routes (or NestJS), Node
- DB: PostgreSQL + Prisma
- Auth: Clerk or Supabase Auth
- Email: Resend/SendGrid
- SMS: Twilio (or defer)
- Analytics: GA4 + PostHog
- Hosting: Vercel (frontend/api), managed Postgres

#10) API Endpoints (MVP)

- POST /api/leads
- GET /api/leads
- GET /api/leads/:id
- PATCH /api/leads/:id
- GET/POST/PATCH /api/routing-rules

- GET/POST/PATCH /api/users
- GET /api/metrics/summary

#11) SLA Rules

- New lead must be touched within X minutes (default 15)
- Breach triggers alert to ops + admin

#12) Acceptance Criteria

- Consumer can complete form and submit successfully
- Lead is auto-assigned by rule
- Assignee receives notification
- Lead appears in dashboard immediately
- SLA breach alert fires correctly
- Metrics page shows daily counts and response times

#13) QA Checklist

- Form validation paths
- Mobile responsiveness
- Duplicate lead handling
- Rule precedence correctness
- Notification delivery success/failure
- Role access restrictions

#14) Launch Plan (30 Days)

- Week 1: IA/UI + DB schema + form scaffolding
- Week 2: intake API + routing + notification
- Week 3: dashboard + rules + SLA alerts
- Week 4: analytics + QA + FL pilot launch

#15) Post-MVP Backlog

- Carrier API integrations
- Multi-state rollout tooling
- Advanced lead scoring
- Agent performance scoring
- Call automation (8x8 integration)

Manus Prompt â Insurify-Style MVP

=====

You are Manus, acting as a senior product+engineering execution agent.

Project Name: Insurance Quote Marketplace MVP (Insurify-style)

Owner: Todd Tomlinson (Tomlinson & Co)

Primary Goal: Launch a fast quote marketplace MVP in 30 days for FL-first operations.

Context:

- Keep this project separate from glossaryofinsurance.com and tcpolicy.com.
- Focus on conversion speed, lead routing, and SLA discipline.

Deliver in this run:

- 1) Architecture proposal (frontend/backend/db/auth/analytics)
- 2) Build-ready implementation plan (week-by-week)
- 3) Data model/schema
- 4) API contract draft
- 5) UX wireframe outline for funnel + dashboard
- 6) QA test plan
- 7) Launch checklist
- 8) Risk register + mitigations

Technical requirements:

- Frontend: Next.js + Tailwind
- Backend: Node (Next API or Nest)
- DB: PostgreSQL + Prisma
- Auth: Clerk or Supabase Auth
- Email notifications: Resend/SendGrid
- Analytics: GA4 + PostHog
- Hosting: Vercel + managed Postgres

MVP scope requirements:

- Public pages: homepage, product pages (auto/home), multi-step quote form, thank-you page
- Internal pages: login, lead dashboard, routing rules manager, SLA alerts view
- Lead routing by state + product type
- Notifications on lead assignment
- SLA alert if untouched > 15 minutes (configurable)

Required lead fields:

- name, email, phone, zip/state, product_type
- source + UTM fields

Output format (strict):

- A) Executive summary (10 bullets max)
- B) System architecture diagram (text/ascii acceptable)
- C) Database schema (tables + fields)
- D) API endpoints and request/response examples
- E) UI page list + component list
- F) 30-day plan with day-by-day milestones
- G) QA test matrix
- H) Launch readiness checklist
- I) Top 10 risks + mitigation actions
- J) Exact next 10 tasks to start tomorrow

Tone:

- Practical, implementation-oriented, no fluff.
- Assume this will be handed directly to engineering for build.
