

Non-IVANS Coverage Framework v1

Objective

Create a single daily operating view that combines IVANS and non-IVANS carrier activity so policy status, renewals, and transaction visibility are reliable across all carriers.

Why This Is Needed

Current reality: only ~25-35% of carriers reliably update through IVANS. If we rely only on IVANS, we miss a large portion of policy movement and create false confidence.

1) Source-of-Truth Model

Use a multi-source hierarchy, not a single feed.

Signal Tiers

1. Tier 1 (High confidence): Direct carrier confirmation (download file, portal evidence, issued policy docs)
2. Tier 2 (Medium confidence): IVANS transaction confirmations
3. Tier 3 (Low confidence): CRM/manual notes without supporting artifact

Record-Level Status Labels

- Verified via Carrier (Tier 1)
- Verified via IVANS (Tier 2)
- Pending Non-IVANS Confirmation
- Exception: Missing Update

2) Daily Monitoring Architecture

Feed A: IVANS Lane

- Failed transactions
- Canceled transactions
- Processed summary
- Timestamp + policy key mapping

Feed B: Non-IVANS Lane

- Carrier portal download logs
- Carrier email docs (decs, binders, cancellation notices)
- Manual upload queue (for broker/carrier docs)
- QuoteRUSH/CD policy-change events where available

Merge Logic

- Normalize by policy number + named insured + effective date
- Prefer Tier 1 over Tier 2 when conflicting
- Flag unresolved mismatches to exception queue

3) Daily Dashboard (Operational View)

Section A: Verified Today

- Count of updates verified via carrier
- Count of updates verified via IVANS

Section B: Pending Confirmation

- Policies with expected update but no Tier 1 evidence yet
- Aging buckets: <24h, 24-48h, >48h

Section C: Exceptions Requiring Action

- Failed/canceled IVANS items
- Non-IVANS carriers with missing daily evidence
- Conflicts (IVANS says X, carrier artifact says Y)

Section D: SLA Snapshot

- % verified within 24h
- % unresolved >48h
- By carrier and by line of business

4) Team Workflow

Roles

- Ops/CSR queue owner: first-pass triage
- Commercial reviewer (Maria): underwriting-critical exceptions
- Producer owner: client-facing decision/escalation

Daily Cadence

- 1) Morning: ingest and normalize both feeds
- 2) Midday: clear high-severity exceptions
- 3) EOD: unresolved list + owner assignment for next day

SLA Targets (v1)

- High severity exceptions: same business day
- Standard exceptions: within 24h
- Aged >48h unresolved: mandatory escalation

5) Carrier Segmentation Strategy

Segment 1: IVANS-Reliable Carriers

- Default auto-monitoring
- Minimal manual effort

Segment 2: Partial-IVANS Carriers

- Hybrid checks (IVANS + portal/email validation)

Segment 3: Non-IVANS Carriers

- Mandatory non-IVANS collection path
- Scheduled portal/email reconciliation

Maintain this mapping list as a living table and review monthly.

6) Data Model Additions (for CD/QuoteRUSH tracking)

Required fields to add/update per policy record:

- source_primary (carrier|ivans|manual)
- source_confidence (tier1|tier2|tier3)
- source_last_verified_at
- verification_artifact_link
- exception_code
- exception_owner
- exception_due_at
- sla_bucket

7) Automation Rules (v1)

1. If no Tier 1 artifact after expected update window -> set Pending Non-IVANS Confirmation
2. If unresolved >24h -> create task + assign owner
3. If unresolved >48h -> escalate to management queue
4. If conflict detected between feeds -> set Exception: Data Conflict and block auto-close

8) Reporting Outputs

Send daily summary to: orlando@usicna.com

Include:

- Verified counts by source
- Exception counts by type
- Top aged unresolved items
- Carrier breakdown (IVANS vs non-IVANS coverage)

9) Implementation Plan (2 Weeks)

Week 1

- Define carrier segmentation table

- Add source-confidence fields
- Build merged daily report draft
- Start manual exception queue

Week 2

- Add automation rules for aging/escalation
- Launch daily summary email output
- Review KPI baseline and tune thresholds

10) KPI Targets (First 30 Days)

- Increase verified daily visibility to >80% of total policy movement
- Reduce unresolved >48h exceptions by 40%
- Achieve 95% exception ownership assignment within same day

Immediate Next Actions

- 1) Build carrier segmentation sheet (IVANS-reliable / partial / non-IVANS)
- 2) Add source-confidence fields to tracking workflow
- 3) Launch daily merged summary to 'orlando@usicna.com'
- 4) Begin exception aging SLA tracking tomorrow
