

QuoteRUSH Lifecycle Implementation Checklist

#Goal

Implement the lifecycle map in QuoteRUSH with clean transitions, mandatory fields, and automation-safe triggers.

#1) Status Setup

- ☐ Create/confirm statuses:
 - ☐ New
 - ☐ Contact Attempted
 - ☐ Engaged
 - ☐ Quote Ready
 - ☐ Proposal Sent
 - ☐ Won
 - ☐ Lost
- ☐ Ensure status names are exact and standardized.
- ☐ Remove/archive duplicate legacy statuses.

#2) Field Requirements by Stage

- ☐ Define mandatory fields for each stage.
- ☐ Add validation prompts/checklists for:
 - ☐ Contact Attempted (channel + timestamp)
 - ☐ Engaged (reply timestamp + next action)
 - ☐ Quote Ready (required intake complete)
 - ☐ Proposal Sent (send timestamp + reference)
 - ☐ Won/Lost (outcome date + reason/premium)

#3) Transition Controls

- ☐ Enforce allowed transitions only.
- ☐ Block shortcuts that skip required work.
- ☐ Add warning for manual overrides.

#4) Automation Hooks

- ☐ New -> create first-touch task
- ☐ Contact Attempted -> schedule follow-up task
- ☐ Engaged -> pause generic drip
- ☐ Quote Ready -> notify producer queue
- ☐ Proposal Sent -> set follow-up reminder
- ☐ Won -> onboarding checklist
- ☐ Lost -> reason capture + nurture eligibility

#5) Compliance Controls

- ☐ DNC/TCPA suppression checked before outbound sends
- ☐ Quiet hours enforced (9PMâ 8AM local)
- ☐ Opt-out immediately suppresses automation
- ☐ Audit trail enabled for status changes and sends

#6) SLA Timers

- ☐ First contact SLA set (<=30 min business hours)
- ☐ Quote Ready -> Proposal SLA set (<=24h)
- ☐ Proposal follow-up SLA set (24â 48h)
- ☐ Alerts configured for stale records

#7) Reporting Dashboard

- ☐ Build stage conversion report
- ☐ Build cycle-time by stage report
- ☐ Build lost-reason report
- ☐ Build owner workload report

#8) QA Test Cases (Run Before Live)

- ☐ New lead created -> first-touch task generated
- ☐ Outbound logged -> status moves to Contact Attempted
- ☐ Inbound reply logged -> status moves to Engaged
- ☐ Required fields complete -> status moves to Quote Ready
- ☐ Proposal sent -> status moves to Proposal Sent
- ☐ Outcome set -> Won/Lost with required fields captured
- ☐ Opt-out event -> all outbound automation stops

#9) Launch Plan

- ☐ Soft launch with small lead segment
- ☐ Daily QA review for first 7 days
- ☐ Fix edge cases quickly
- ☐ Full rollout after stable metrics

#10) Ownership & Cadence

- ☐ Name primary owner for lifecycle governance
- ☐ Name backup owner
- ☐ Weekly 15-minute lifecycle health review scheduled
- ☐ Monthly cleanup of status/data anomalies
